

Kaspersky Endpoint Security for Business

Protect what your business values most

Now that cybercriminal tools are so inexpensive, organizations are seeing a dramatic growth in security events and an increase in the likelihood of a targeted attacks. We can add remote working and the proliferation of information exchange methods to the mix, and the fact that most of us have grown up online and have become complaisant about safe cybersecurity practices. In this challenging environment, how can you be sure that you have the right security product for your business – one that will protect every element of your IT infrastructure against the most advanced cyberthreats, and ensure business continuity in a changing world, without blowing your budget?

Kaspersky Endpoint Security for Business delivers the full stack of 'building blocks' to deliver automated threat defense and systems hardening that scales with your business, safeguarding its continuity and assets. The results speak for themselves.

World-leading threat intelligence is built into our DNA and influences everything we do. As an independent company we are more agile, think differently and act faster to confront and neutralize cyberthreats, regardless of their origin or purpose. That's how our product is able to deliver adaptive protection that no other vendor can offer.

A perfect balance of performance and efficiency

Our adaptive technologies combine with a multi-layered approach to achieve the perfect balance of performance and protection efficiency¹.

Protect endpoints, servers and gateways

The world's most tested, most awarded security technologies boost detection with minimal false positives to protect endpoints, servers and gateways.

Harden systems and boost productivity

Host Intrusion Prevention and cloud-enabled web, device and application controls with default deny all reduce your attack surface and help keep corporate resources under control, even outside your IT perimeter.

Spot more attacks and intrusions

Adaptive security protects user devices from targeted attacks which exploit unpatched vulnerabilities in OSs and other common applications. It also identifies abnormal behavior, automatically detecting and remediating targeted ransomware and fileless threats.

Save time by automating OS and software deployment tasks

Setting up new workstations in branches and home offices can be done remotely and automatically. You can also roll out and schedule new applications for automatic installation after-hours.

Simplify migration initiatives

Straightforward migration from third-party endpoint protection solutions helps ensure a smooth, error-free transition, while our post-deployment quality assurance audit service can checks that the configuration is correct.

Streamline security management and delegation

The unified console with a cloud² or on-premise deployment model supports Active Directory integration, as well as Role-Based Access Control (RBAC) and customizable dashboards, so access can be streamlined in line with individual team member responsibilities.

Cut total cost of ownership and complexity

Forrester's TEI report, based on customer interviews, confirms that Kaspersky customers experienced a ROI of 441% with our solution³. With our new SaaS offering, we also take care of console upgrades and much more, at no extra cost, with the potential to deliver an even higher ROI. Our enterprise-grade cloud console³ lets you focus on security events, not on maintenance tasks.

Common Criteria

¹ "The Forrester Wave™: Endpoint Security Suites, Q3 2019. The 15 Providers That Matter Most And How They Stack Up" by Chris Sherman with Stephanie Balaouras, Merritt Maxim, Matthew Flug, and Peggy Dostie.

² There are some restrictions to the range of features and functionality that can be managed via the cloud console. For full information, see the [online help](#).

³ "The Total Economic Impact™ Of Kaspersky Security Solutions," Forrester Research, Inc., January 2020.

Seamless digital transformation

Automated software deployment and smooth upgrades between product versions minimize the number of deployment status events, saving the time – and expense – of security professionals, who are freed up to focus on more important tasks.

Our knowledge is your power

Superior detection rates and built-in adaptive security enable you to respond fast to a significant numbers of attacks, decreasing your TCO and minimizing the number of events requiring human triaging.

Avoid expensive mistakes

Default security settings are optimized, and our built-in security advisor monitors modifications, alerting administrators to potentially costly errors.

Three progressive feature packs

The tools and technologies in Kaspersky Endpoint Security for Business are intelligently balanced across progressive tiers to meet your evolving security and IT needs at every point in your business journey. See [our separate data sheet](#) – for more details.

Support and services

Operating in more than 200 countries from 35 offices worldwide, our Technical Support has your IT specialist's back, delivering vendor advice when you need it most, 24/7/365. Our post-deployment audit service checks that the configuration is correct and provides quality assurance for partner- and customer-led implementations. Learn more [here](#).
